

Amendment to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) A mobile telecommunications device for accessing a server via a wireless telecommunications network, the device being configured to be provided with data by the user prior to establishing a connection with said server, said data comprising information for ~~accessing~~ identifying said server and further information ~~for use to be used~~ by said server, and said device being configured to access said server using said data for identifying said server and information for identifying said device and after a connection has been established, to transmit said further information to said server ~~subsequent to establishing said connection.~~

2. (original) A device according to claim 1, wherein search engine software is associated with said server.

3. (original) A device according to claim 2, wherein said search engine software is run on said server.

4. (original) A device according to claim 1, wherein said information for accessing said server includes a predefined link to said server.

5. (original) A device according to claim 4, wherein said information for accessing said server includes a command selecting said predefined link.

6. (original) A device according to claim 1, wherein said further information comprises a request to be provided with a response from said server.

7. (original) A device according to claim 6, wherein the device is configured to receive said response.

8. (original) A device according to claim 7, wherein said response includes a link for accessing a web page.

9. (original) A device according to claim 1, wherein said further information comprises a search string for search engine software.

10. (original) A device according to claim 1, wherein said device configured to be provided with said data from said user prior to a session between said device and said server.

11. (original) A device according to claim 1, wherein the device is configured to provide a user interface for receiving said data from the user.

12. (original) A device according to claim 11, wherein said user interface includes a controller for processing said data from the user.

13. (original) A device according to claim 11, wherein said user interface includes keys for entering said data.

14. (original) A device according to claim 11, wherein said user interface includes a display for guiding said user when entering said data.

15. (original) A device according to claim 11, wherein said user interface is configured to provide a menu comprising a plurality of selectable menu items.

16. (original) A device according to claim 15, wherein a first menu item comprises a link for accessing a web page.

17. (original) A device according to claim 16, wherein a second menu item comprises an editor for entering information.

18. (original) A device according to claim 17, wherein said editor is a text editor for entering a search string for search engine software.

19. (original) A device according to claim 1, wherein said device is WAP-enabled.

20. (original) A device according to claim 1 which is a mobile telephone handset.

21. (original) A device according to claim 1 which is a PDA.

22. (currently amended) A method, in a mobile telecommunications device, of accessing a server via a wireless telecommunications network, the method comprising:

said device being provided with data from said user, said data comprising information for ~~accessing~~ identifying said server and further information ~~for use to be used~~ by said server;

establishing a connection with said server using said data for identifying said server and information identifying said device and

transmitting said further information to said server subsequent to establishing said connection.
